

## Directions for Ratios

Print out the boards and pictures on cardstock. Laminate before cutting out pictures. Also, print out a record page. Now your student is ready to play. This is done the same way as a regular word ratio chart, only with pictures added. Using the concepts as a guide the student will decide which column he is going to put a picture, he then writes the correct spelling for that word on the record page. If a student is unable to spell a word (a very low student), then get him or her to place the pictures on the board only.

Have fun
